

[Job Description: Full Stack Team Leader](#)

About Capitols

Established in 2017 by some of the most experienced and successful technology and finance entrepreneurs in the world, we are Capitolis – a Fintech company where capital meets markets. We are located in the heart of Tel Aviv, New York City and London and have attracted funding by world class technology VCs: Sequoia Capital and Index Ventures.

We are revolutionizing the capital markets industry: we are developing new technology models providing new business opportunities for the global banks and their clients. Our products and services are truly ground-breaking. We can do this because we have deep expertise in finance and tech working at the biggest institutions, and because we want to make the capital markets a place of better connectivity and more opportunity.

We are now at the next stage of our journey and excited to grow the team! We are looking for talented, driven, and creative people to join our R&D center in Tel Aviv and help us make an impact on the global financial markets. We want you if you love working with technology and like to challenge convention, like an exciting working environment which never sits still.

As a FED Team Leader, you will:

- Lead a large team of Full Stack developers working on Capitolis products.
- Architect efficient and reusable front-end systems, and design the libraries and frameworks.
- Mentor Full Stack team members in the technical aspects of their work.
- Collaborate with Product Designers, Product Managers, and other Team Leaders to plan, nurture, and implement an efficient and effective development process.
- Recruit top talented developers to our group.
- Mentor and advise your team in code review, pair programming and more.
- See the big picture of group tasks and take decisions.
- Be an at least 80% hands-on developer as part of the team.
- Influence on Capitolis Engineering by interacting with stakeholders outside the team.

What should you bring to the team?

- Your passion for frontend concepts including reusability, good engineering and great user experience
- B.Sc. or M.Sc. in Computer Science or related field
- 5+ years of experience, perspective and deep understanding of the tradeoffs in the Full Stack world
- 2+ years of experience leading engineering teams
- Extensive experience with a major modern FED framework like React or Angular
- at least 2 years in react, at least 3 years in Node.js

Location: Midtown Tower, Tel- Aviv
